## First Press Release

ASSET - Agency of the Chamber of Commerce of Basilicata participates in the Erasmus Plus "**Chat2Learn**" project, coordinated by the Department of Computer Science of the University of Cyprus, together with partners from Bulgaria (Nikanor), Netherlands (Lidi Smart Solutions) and Spain (DomSpain).

The project - focused on the use of Technology Enhanced Learning and of chatbots in particular – is aimed at creating a chatbot to be used for adult education and training, starting from the digital entrepreneurial education, able to interact with users as closely as possible to human interaction, like a real teacher or tutor.

With chatbots, moreover, we now interact more and more often in a natural way: for example, think that when we look for something on a search engine we can "talk" on the mobile phone, that gives us the information we need.

Chatbots can be used not only to give information but for educational and training purposes as well. The partners have identified many good practices to understand how to implement effective chatbots. Some are well known, others more experimental: all of them help learn languages, mathematics or science, proving excellent learning supports for improving knowledge and skills. Moreover, it is a very helpful tool that is not in competition with humans: it is hard to imagine, even in the distant future, to learn without the humanity and empathy of a real teacher!
